

High Tonnage Rate Conveying
Long Distance Conveying
Extreme Reliability for Severe Applications
Minimal Maintenance
Decreased Downtime
Seamless Integration
Fully Customizable

The Macpump® is an arrangement of two pressure vessels working in an automated and phased sequence to provide a continuous transfer of material such as cement, with high pipeline loading for high tonnage rate applications in long conveying distances up to 3000 ft. Our robust proprietary Dome Valve® is used throughout the system for material inlet, discharge, and vessel venting. In addition, the discharge valve opening size is continuously modulating in response to pipeline back-pressure to achieve the highest possible conveying efficiency. The Macpump® is for instance, applied to mineral transfer applications where distance and tonnage rate requirements are high.

- Temperature rating up to < 1000°F (537°C)
- Standard pressure rating up to 100psig (7barg). Higher pressure ratings available
- Standard material 516 Gd70 carbon steel
- Available in 304/316 stainless steel, aluminum, galvanized, and others
- Food grade, FDA, and pharmaceutical finishes and coatings
- Industrial coatings such as Teflon®, tungsten carbide, nickel, and others
- Fully assembled and tested prior to shipment
- Manufactured in Maryville, TN USA
- Global customer support for service and spare parts
- ISO 9001:2015 Certified
